

iVolution: product line extension

Jan Van Overbeke

The therapy: indication

Treatment of de novo or restenotic atherosclerotic lesions in peripheral arteries located under the aortic arch with a nominal diameter from 4.5 to 9.5 mm

Key features

Use in **exposed arteries** - iliac, superficial femoral artery (SFA) and popliteal artery

FLEXIBILITY

**RADIAL
FORCE**

Stent technology

- ✓ **Open cell** design with **short cell length** to feature:
 - Outstanding flexibility
 - High adaptability to vessel
 - No flaking (no fish scaling effect)
 - Anti-kinking

- ✓ **Closed cell** in both ends for maximum control of stent release (no popping)
- ✓ **4 radiopaque markers** at each end of the stent

► Open short-cell design

► 4 RO markers in either end of the stent

Stent technology

✓ **Continuous design.** Links are extensions of struts for more homogeneous distribution of stress and less risk of fracture

- ✓ High arterial wall **coverage**
- ✓ Perfect **recovery** after impact
- ✓ Best-in-class **radial force**

Stent technology

Balance between adaptability and arterial support

Flexibility

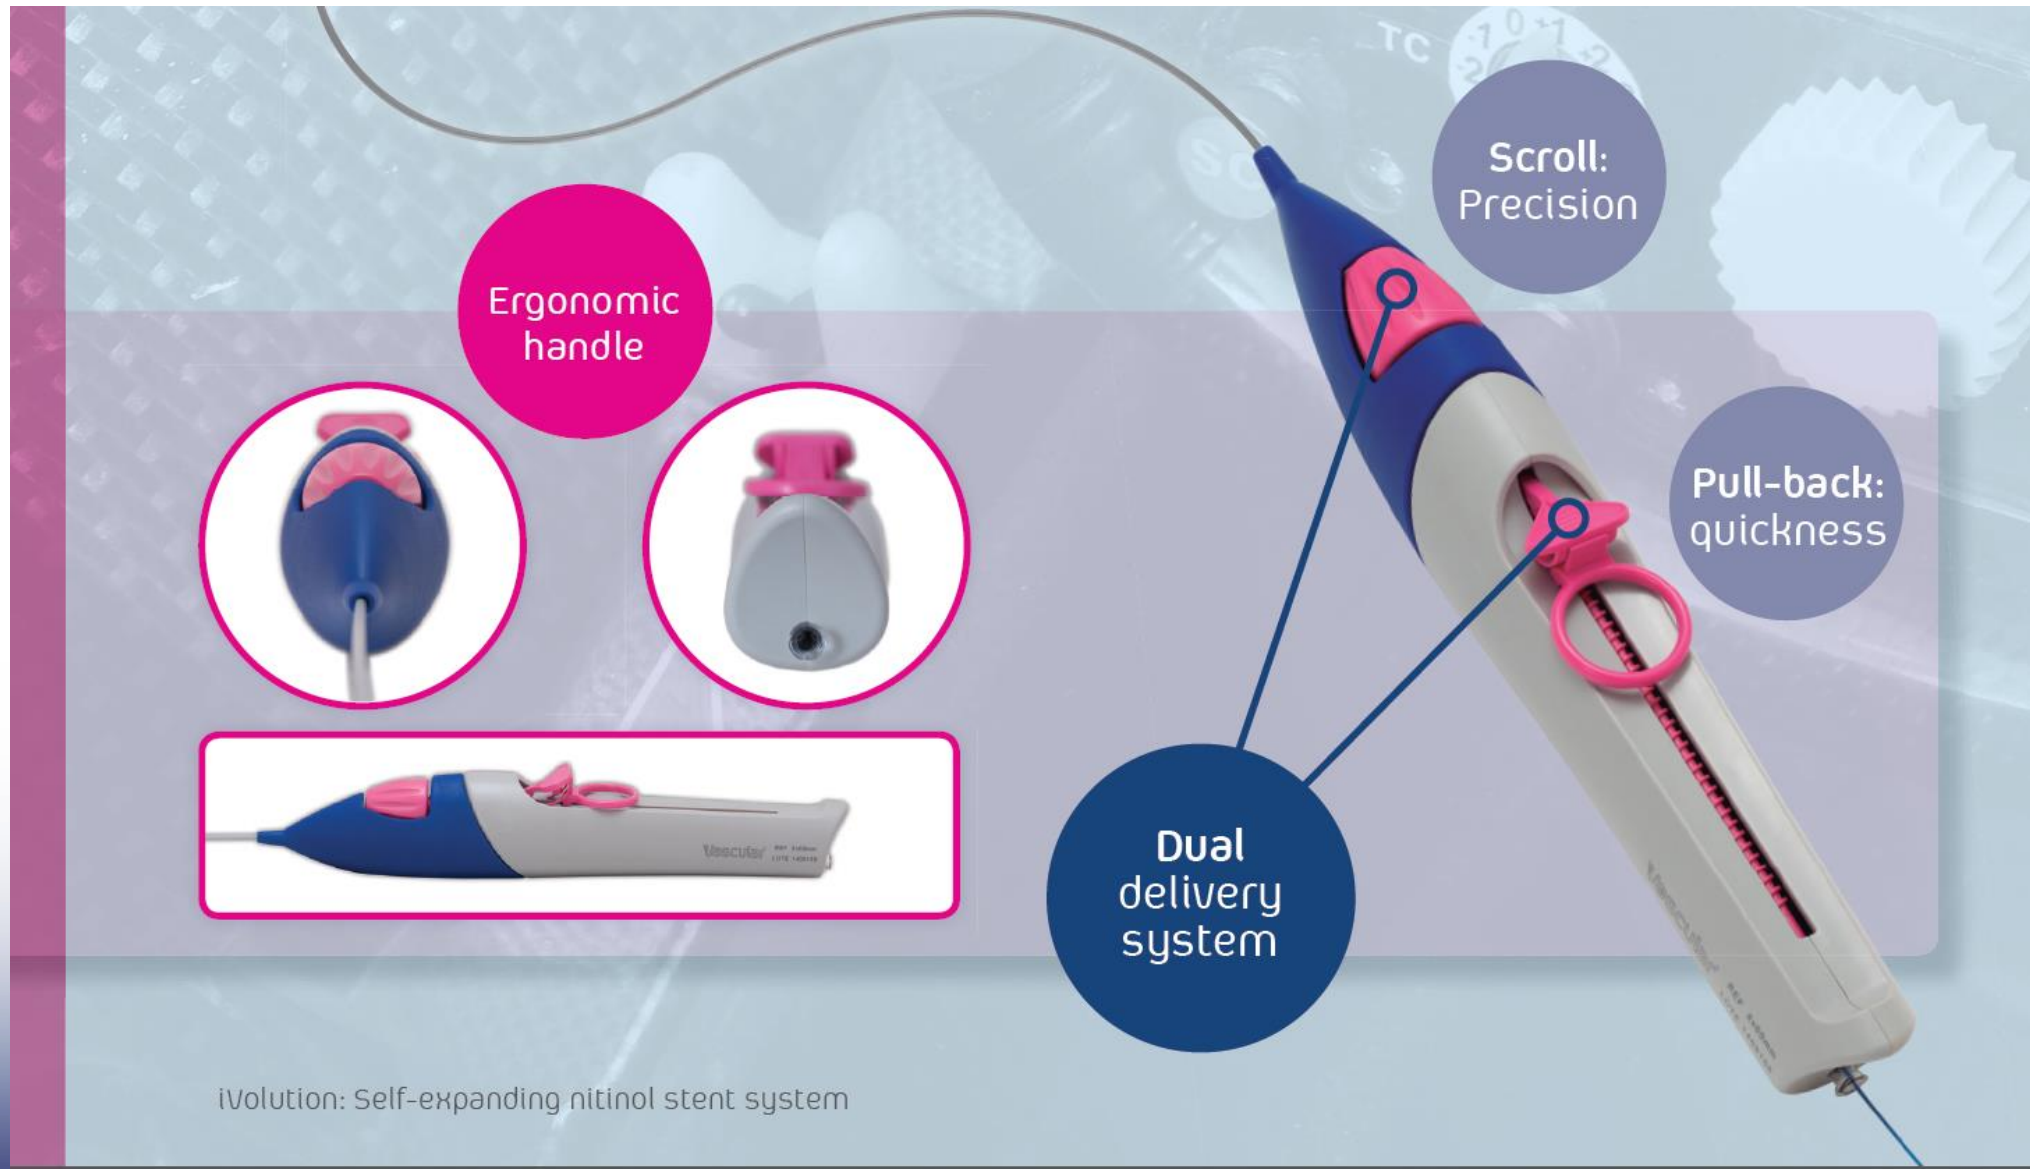

Radial force

Delivery system

Delivery system

Delivery system

- ✓ Triple sheath design for a comfortable and safer delivery
- ✓ High visibility
 - 2 radiopaque markers on the catheter to limit the stent
 - 1 extra marker on the moving sheath for continuous visibility of the delivery
- ✓ PTFE- coated retrievable sheath for a smooth delivery
- ✓ Non-traumatic soft tip
- ✓ Fully compatible with 6F introducer for all stent sizes

General features

- Nitinol stent
- Triple sheath catheter
- Catheter length: 80 and 140 cm
- Compatible with 6F introducers
- Compatible with 8F guiding catheters
- Compatible with 0.035" guidewires
- 4 RO markers in each end of the stent
- 2 RO markers in the catheter
- 2 handles sizes:
 - Small (L: 40 mm – 100 mm)
 - Large (L: > 100 mm)

Key to success: deployment tips & tricks

Keep control while delivering

1. Choose the correct length of the delivery device, according to the situation of the lesion
2. Introduce the triple sheath into the hemostasis valve of the introducer
3. Keep the system stretched (tensed)
4. Try not to move the handle while delivering

AVOID SHORTENING ON EXPANSION

Evaluate the different ways for delivering de stent

TEST DEMO

- Triple sheath outside the introducer / system bended

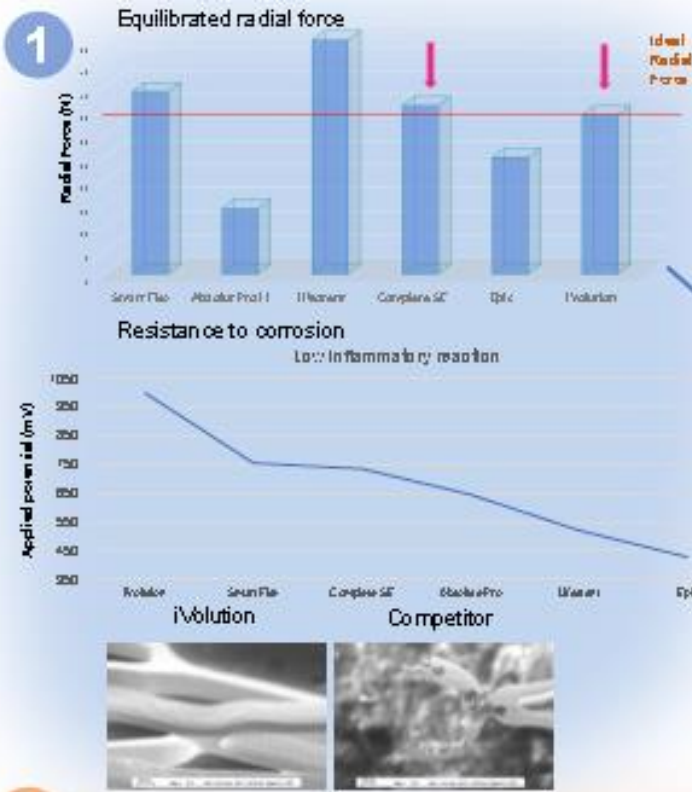

TEST DEMO

- Triple sheath inside the introducer / system straight

1

2

Best resistance to fracture = stent design without bridges nor direct connections (J. Endovascular Ther 2010-Minle-Hahnbeck Comparison 2nd generation stents for application in SFA)

- Multicell stent doesn't have bridges
- Continuous design
- Open cell design with short cell length

2 type of Fatigue Tests to prove design concept:

Test case scenario:

1. Stent: 6.8mm
2. 10 samples tested simultaneously
3. Stents implanted in a mock vessel with inner diameter of 7.5mm
4. Controlled pressure is induced to the artery to simulate deformation
5. 400 M cycles are applied

Results:

1. After the test, no damage nor fractures were observed
2. iVascular stent radial durability = 400 million of cycles

New manufacturing process and stent design are key elements to improve clinical outcome:

The iVascular SX stent example

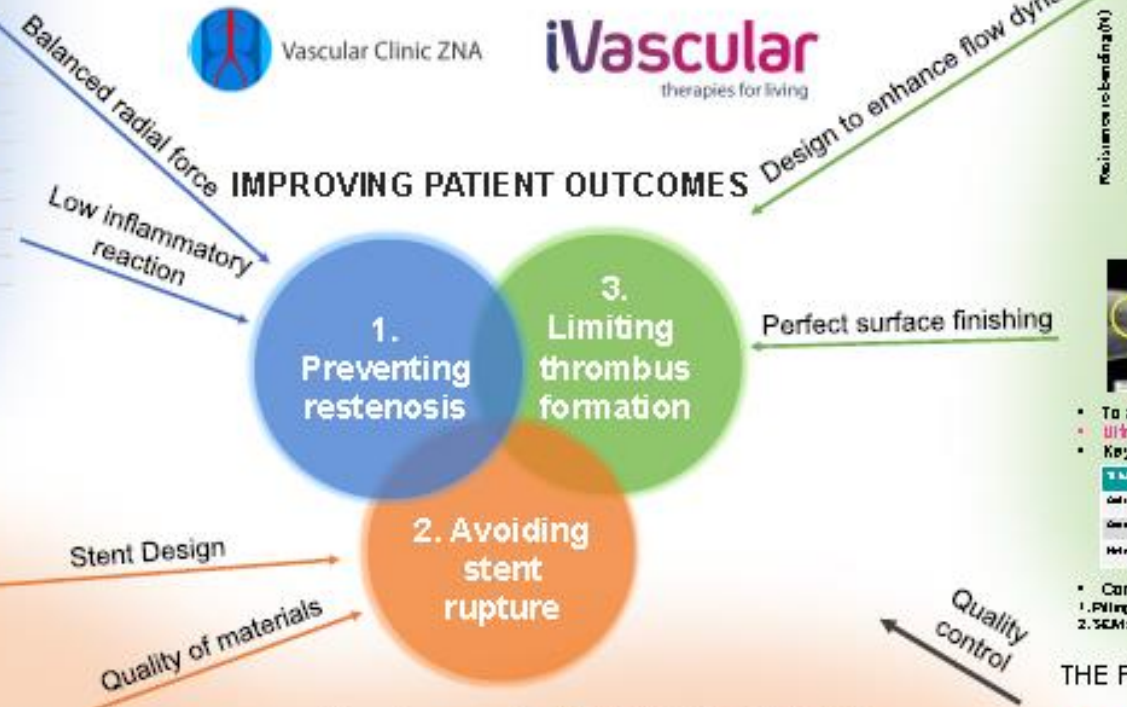

Research MD: K. Lauwers MD, L. Heilsoot MD, K. Teymans MD, P. Verbruggen MD (Vascular Clinic ZNA, Antwerp, Belgium)
PhD, APPhy: (Paris Institute of Technology Paris, France)

Occlusion proximal & mid left SFA : Luminor & Ivolution 200mm

Summary

		Flexibility	Resistance to bending	Artery straightening	Resistance to impact	Radial force	Global punctuation
	iVolution	6	6	7	7	7	33
	Misago	7	7	7	1	3	25
	Smart Flex	2	1	3	5	4	15
	Absolute Pro	5	4	5	4	1	19
	Lifestent	3	5	5	6	2	21
	Complete	1	3	3	3	6	16
	Epic	4	2	1	2	5	14

Competition

- Everflex (MDT): 200mm (6&7mm diameter)
- Life stent solo (Bard): 200mm (6&7mm diameter)
- Sinus superflex (Optimed): 180mm (6&7 mm diameter)
- Supera (ABT): 200mm (5&6mm diameter)
- Misago stent (Terumo) : recalled from the market
- Epic (BSC) : 120mm max length

Feedback Dr Goverde

The iVolution 200 mm :

“a very nice extension of the iVolution portfolio with a reliable delivery device that can guarantee you an very accurate placement without the risk of elongation”

“Together with the excellent characteristics of the existing iVolution stents makes it a “need to have on the shelf” “
